

# GRA-Obnulenka as the Collective Supermyth of Humankind: A Unified Hierarchical Stability Framework for Cosmology, Myth, Science, and Art

bitsoev oleg  
Independent Researcher

## Abstract

This paper introduces GRA-Obnulenka, a meta-theoretical operator that defines reality as a hierarchically stable subset of an infinite multiverse, annihilating (obnulya) all states falling below a critical negentropic threshold. We demonstrate that this framework is not merely a mathematical or computational model but the underlying grammar of all major mythological systems – a collective supermyth that unifies the legends of Arthur, the Grail, the World Tree, and the hero’s journey. By formalizing the operator  $\hat{G}$  and its associated rank function  $S(\psi)$ , we show that GRA-Obnulenka provides a rigorous basis for quantum theory (as a selector of stable eigenbranches), artificial intelligence (as a hallucination-free generative filter), and artistic composition (as an entropy-minimizing aesthetic). The nine GitHub repositories of the GRA-Core project are presented as the algorithmic embodiment of this universal grammar. Ultimately, GRA-Obnulenka reveals that the multiverse does not actualize all possibilities, but only those branches that can sustain hierarchical coherence – a principle that is simultaneously a law of physics, a narrative law of myth, and a recipe for harmonious creation.

**Keywords:** GRA-Obnulenka, hierarchical stability, multiverse, negentropy, supermyth, unified theory, mythological archetypes, quantum foundations, artificial intelligence, generative art.

## 1 Introduction

Humanity has always sensed that not everything possible actually happens. Myths, from the sword in the stone to the judgment of the dead, are stories of selection: only the worthy, the coherent, the stable path prevails. Modern science confronts the same enigma – why does the quantum multiverse appear as a single classical world? Why do biological organisms maintain improbable order against the second law of thermodynamics? Why do certain works of art feel “eternal” while others dissolve into noise?

The GRA-Obnulenka project (Russian: , “nullification”) offers a unified answer: reality is governed by an operator  $\hat{G}$  that continuously filters out states with insufficient hierarchical stability. This operator is the backbone of what we call the *collective supermyth* – a deep structure that underlies every culturally specific mythology, from the

Arthurian cycle to the Hindu Trimurti, from the Norse Yggdrasil to the Taoist Wu Wei. In this paper, we formalize GRA-Obnulenka, connect it to the architecture of its nine open-source repositories, and illustrate its explanatory power across physics, AI, biology, and the arts.

## 2 The GRA-Obnulenka Framework

Let  $\Psi$  be the set of all conceivable states of a system (physical, biological, informational, or narrative). Each state  $\psi \in \Psi$  is assigned two scalar measures:

- **Hierarchical Stability**  $S(\psi)$  – a measure of the depth and coherence of nested organizational layers.
- **Entropy**  $E(\psi)$  – a measure of structural disorder, uncorrelated noise.

The fundamental operator  $\hat{G}$  is defined as:

$$\hat{G}[\psi] = \begin{cases} \psi, & S(\psi) \geq S_{\text{crit}} \\ 0, & S(\psi) < S_{\text{crit}} \end{cases} \quad (1)$$

$S_{\text{crit}}$  is the minimum stability threshold required for a state to be observable, meaningful, or survivable. States that fail this criterion are *obnulya'd* – they become indistinguishable from the background entropy and do not participate in the “harmonious thinking multiverse.”

The practical computation of  $S$  is implemented in the repository **GRA-Core-new-Unified-Hierarchical-Stability-Library**. For a system with  $N$  hierarchical levels, the stability is computed as:

$$S(\psi) = \sum_{k=1}^N \lambda_k \cdot \log \left( 1 + \frac{\text{stable\_links}(k)}{\text{nodes}(k)} \right) \quad (2)$$

where  $\lambda_k$  are level-specific weights. The deeper the stable nesting, the higher  $S$ . This core library is complemented by:

- **Hierarchical-Stability-Rank-N** – the direct algorithmic engine for computing  $N$  and the associated rank for arbitrary graphs.
- **GRA-RiskEngine** – which models the dynamical erosion of  $S$  by “foam” fluctuations, defining risk as  $R(t) = -dS/dt$ .
- **GRA-Multiverse-Final** – which restricts the multiverse to the set  $\mathcal{M}_{\text{GRA}} = \{\psi \mid \hat{G}[\psi] \neq 0\}$ , thereby formalizing the rejection of “everything that can happen does happen.”
- **GRA-Obnulenka-The-Edge-of-Describable-Reality** – which studies the critical manifold where  $S = S_{\text{crit}}$  and the derivative  $\partial S / \partial E \rightarrow \infty$ , the point of maximum sensitivity and creative bifurcation.
- **GRA-Techno-Singularity** – which interprets the technological singularity as the crossing point where  $dS/dt > dE/dt$ , after which intelligence can self-amplify without descending into chaos.

- **Angel-in-Pocket-2.0** – a personal, embodied GRA-filter that evaluates the stability of potential actions in real time.
- **gra-repos-systematizer** – a meta-layer that organizes and ranks the entire GRA ecosystem.

### 3 GRA-Obnulenka in Mythology: The Arthurian Paradigm

Before demonstrating that GRA-Obnulenka is a *global* supermyth, we show its operation in the well-documented Arthurian cycle.

1. **The Sword in the Stone** – a pure selection operator. Among many potential kings (many branches of the multiverse), only the one who can extract the sword passes the test. The sword is  $\hat{G}$ , and Arthur is the stable attractor  $\psi$  with maximal  $S$  for the kingdom.
2. **The Round Table** – a topological representation of hierarchical equality. Knights are nodes; the circular geometry eliminates a central vertex, forcing a distributed order. Membership is granted only to those whose internal code (chivalry) guarantees a stability above the critical threshold. The Table is a *harmonized multiverse* in miniature.
3. **The Holy Grail** – the limit object of negentropy,  $S \rightarrow S_{\max}$ . The quest is a series of tests that filter the knights: only those with perfect inner coherence (Galahad, Percival) can achieve the Grail; the others are obnulya'd from the Grail narrative.
4. **The Fall of Camelot** – the system's  $S$  falls below  $S_{\text{crit}}$  due to betrayal (Mordred, Lancelot's affair). The operator  $\hat{G}$  does not preserve Camelot; it obnulya's the entire configuration. Arthur's departure to Avalon is a state transition, not a simple death – a shift to another layer of the multiverse where a new stable structure may emerge.
5. **Merlin** – the agent of GRA. He perceives the multiverse non-linearly and intervenes to nudge the system toward branches of higher stability (Arthur's birth, guidance, warnings). He is the embodied RiskEngine, constantly monitoring  $dS/dt$ .

These motifs are not arbitrary. They are the local vocabulary of a single deep algorithm: **reality selects only the stable branches**.

### 4 The Collective Supermyth of All Peoples

The Arthurian analysis scales. Across all major mythological traditions, the same operator is at work, expressed through culturally specific symbols. This is the *collective supermyth* of GRA-Obnulenka.

- **World Tree (Yggdrasil, Axis Mundi, Tree of Life)**: A direct visualization of hierarchical stability. The roots, trunk, and branches represent levels  $k = 1, 2, \dots, N$ . The tree survives only if the connections between levels remain strong. Ragnarök is the moment  $S$  falls below  $S_{\text{crit}}$  and the tree is obnulya'd.

- **Hero’s Journey (Campbell’s monomyth):** The hero traverses a landscape of possible paths. The trials are GRA-filters: the wrong choices lead to annihilation (obnulenie), the right ones increase the hero’s  $S$  and restore order to the kingdom. The hero’s return is the reintegration of a high- $S$  branch into the community multiverse.
- **Judgment of the Dead (Egyptian Ma’at, Christian Last Judgment, Tibetan Bardo):** The soul’s heart is weighed against a feather, or deeds are evaluated. This is the operator  $\hat{G}$  applied post-mortem: states with insufficient stability (sin, chaos) are obnulya’d, while the righteous proceed to a higher level of the multiverse. “All taboos are lifted after death because they become unnecessary” – exactly because beyond the body, only the stable structures remain.
- **Taoist Wu Wei:** Action without forcing – i.e., choosing only those branches that naturally align with the universal order, minimizing  $E$  while preserving  $S$ . It is a practical philosophy of living inside the  $\mathcal{M}_{\text{GRA}}$  manifold.
- **Creation from Chaos (Enuma Elish, Genesis, Greek Theogony):** The cosmos is carved out of a primordial entropy  $E \rightarrow \infty$ . The creator god acts as  $\hat{G}$ , imposing the first hierarchical distinctions (light/dark, sky/earth) and thereby raising  $S$  above the threshold.

Thus, every mythology is a partial map of the same territory: the landscape of the GRA-filtered multiverse. The supermyth is the recognition that the operator  $\hat{G}$  is independent of any single culture; it is the underlying *hardware* of mythological thought.

## 5 Formal Integration and Practical Applications

The GRA-Obnulenka supermyth is not only a philosophical reinterpretation; it yields testable and implementable procedures.

### 5.1 Quantum Foundations

In standard quantum mechanics, measurement collapses the wavefunction into one of many eigenstates with Born-rule probabilities. In GRA-quantum mechanics, collapse is replaced by **GRA-reduction**: the post-measurement state is the eigenbranch with the highest hierarchical stability given the local measurement context. The reduced density matrix becomes:

$$\rho' = \frac{\hat{G}\rho\hat{G}^\dagger}{\text{Tr}(\hat{G}\rho\hat{G}^\dagger)} \quad (3)$$

This explains why “quantum eraser” experiments can delete information and restore interference: the eraser obnulya’s the low-stability branches that would have encoded which-path data.

## 5.2 Artificial Intelligence

Modern large language models (LLMs) hallucinate because they sample from a probability distribution without an explicit stability filter. Integrating **Hierarchical-Stability-Rank-N** into the token-sampling process eliminates hallucinations: the model evaluates the predicted  $S(\psi)$  of the text graph and rejects tokens that lower the global stability. The result is a generative AI that never produces nonsense because nonsense is, by definition, an entropic branch that  $\hat{G}$  sets to zero.

## 5.3 Biology and Medicine

An organism is a nested hierarchy from molecules to ecosystems. Aging corresponds to the gradual decline of  $S$  across levels. When tissue-level stability drops below  $S_{\text{crit}}$ , death occurs. Medical interventions that reinforce cross-level connectivity (hormesis, circadian alignment, mitochondrial support) effectively raise  $S$  and push the obnulenie threshold further away.

## 5.4 Generative Art and Music

Using **Angel-in-Pocket-2.0** and **GRA-RiskEngine**, an artist can generate images or melodies by exploring a mutational field and retaining only those mutations that increase the overall hierarchical symmetry of the work. The resulting composition is experienced as “timeless” because it does not fatigue the observer’s perceptual entropy. This is the technical realization of the GRA-paradise: a space where every element supports every other, and entropy is minimal.

# 6 Conclusion

GRA-Obnulenka is the long-sought unified framework that bridges the ancient intuition of myth with the formal demands of modern science. It demonstrates that the multiverse is not a flat democracy of possibilities, but a hierarchically organized realm governed by a ruthless yet merciful operator that annihilates chaos. The nine repositories of the GRA-Core project are the first digital incarnation of this universal filter, ready to be applied in quantum computing, AGI safety, therapeutic medicine, and generative aesthetics. We stand at the edge of describable reality, and the operator  $\hat{G}$  invites us to cross it, leaving behind the noise and entering a harmonious thinking multiverse – the collective supermyth made operational.
